Autonics TCD220028AD

Digital Counters / Timers

FXM / FXH Series

PRODUCT MANUAL

For your safety, read and follow the considerations written in the instruction manual, other manuals and Autonics website.

The specifications, dimensions, etc. are subject to change without notice for product improvement. Some models may be discontinued without notice.

Features

- Counting speeds: 1 cps / 30 cps / 2 kcps / 5 kcps
- Switch between counter and timer operation using DIP switch
- No-voltage input (NPN) using DIP switch
- Operation modes: count-up, count-down, count-up / down
- · Set decimal point, hr / min / sec display with RESET key

[Counter]

· 20 input modes, 18 output modes

- Various output modes (16 output modes)
- 8-digit models: 0.01 sec to 99999 hr 59.9 min
- 6-digit models: 0.1 sec to 99999.9 hr
- 4-digit models: 0.01 sec to 9999 hr
- · Output model types: single preset, dual preset, indicator only
- Power supply: 100 240 VAC ~ 50 / 60 Hz

Safety Considerations

- Observe all 'Safety Considerations' for safe and proper operation to avoid hazards.
- ▲ symbol indicates caution due to special circumstances in which hazards may occur.

⚠ Warning Failure to follow instructions may result in serious injury or death.

- 01. Fail-safe device must be installed when using the unit with machinery that may cause serious injury or substantial economic loss. (e.g. nuclear power control, medical equipment, ships, vehicles, railways, aircraft, combustion apparatus, safety equipment, crime / disaster prevention devices, etc.) ilure to follow this instruction may result in personal injury, economic loss or fire.
- 02. Do not use or store the unit in the place where flammable / explosive / corrosive gas, humidity, direct sunlight, radiant heat, vibration, impact, or salinity may be present.

Failure to follow this instruction may result in explosion or fire.

- 03. Install on a device panel to use.
 - Failure to follow this instruction may result in fire or electric shock.
- 04. Do not connect, repair, or inspect the unit while connected to a power
 - Failure to follow this instruction may result in fire or electric shock.
- 05. Check 'Connections' before wiring.

Failure to follow this instruction may result in fire. **06. Do not disassemble or modify the unit.**

Failure to follow this instruction may result in fire or electric shock.

⚠ Caution Failure to follow instructions may result in injury or product damage.

01. When connecting the power / sensor input and relay output, use AWG 20 (0.50 mm²) cable or over, and tighten the terminal screw with a tightening torque of 0.74 to 0.90 N m.

Failure to follow this instruction may result in fire or malfunction due to contact

- 02. Use the unit within the rated specifications.
 - Failure to follow this instruction may result in fire or product damage
- 03. Use a dry cloth to clean the unit, and do not use water or organic solvent. ailure to follow this instruction may result in fire or electric shoc
- 04. Keep the product away from metal chip, dust, and wire residue which flow into the unit.

Failure to follow this instruction may result in fire or product damage.

Cautions during Use

- Follow instructions in 'Cautions during Use'.
- Otherwise, it may cause unexpected accidents.
- Use the product, 0.1 sec after supplying power.
 When supplying or turning off the power, use a switch or etc. to avoid chattering.
- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- \bullet When the counter is operating, in case of contact input, set count speed to low speed mode (1 cps or 30 cps) to operate. If set to high speed mode (2 k, 5 kcps) counting error occurs due to chattering.
- Keep away from high voltage lines or power lines to prevent inductive noise. In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line.
- Do not use near the equipment which generates strong magnetic force or high
- This unit may be used in the following environments
- Indoors (in the environment condition rated in 'Specifications')
- Altitude max. 2.000 m
- Pollution degrée 2 - Installation category II

- · Various time setting ranges:

Ordering Information

This is only for reference, the actual product does not support all combinations. For selecting the specified model, follow the Autonics webstie.

Mode Setting

Dot for Decimal Point & Hour / Min / Second

- If there is no RESET key or DIP switch input for 60 sec, it returns to RUN mode.
- [RESET] key: Setting mode → RUN mode
 Move the digit when changing the setting value.

Decimal point of counter

Parameter	Display	Setting range
C1-1 Setting mode	dР	-
		[FX4[]-[]4],,,
C1-2 Decimal point		[FX6M-□4],,,,
C1-2 setting	setting	[FX8M-□4],,,,
		,,,, -,

Dot for Hour / Min / Second of timer

Parameter		Display	Setting range	Setting example
T1-1	Setting mode	dP	-	-
T1 2	T1-2 Setting of dot for Hour / Min / Sec		CLR: Not divided with dot	5959: 59 m 59 s
11-2		ELr	SET: Divided with dot	0.59.59: 59 m 59 s

Error

- When error occurs, the output turns OFF.
 When 1-stage setting value = 0, OUT1 turns OFF.
 When 2-stage setting value < 1-stage setting value, OUT1 is ignored and only OUT2 operates.
 Indicator model does not have error display function.

Display	Description	Troubleshooting
ErrO	Setting value = 0	Change the setting value anything but 0.

Output Operation Mode

For the detailed timing chart for operation output mode, refer to the manual.

Detach the Case or DIP Switch Cover

■ FXM

 Push and pull the groove of DIP switch cover with a flat head (-) driver to the front, detaching the cover from the case.

■ FXH

- Push the groove of the front guide with a flat head (-) driver and pull it to the front.
- Pull the front guide to the front. The case is detached. DIP switch is located inside.

 \triangle Caution: Turn OFF the power before detaching the cover or case. \triangle Caution: When using the tools, be careful not to be wounded.

DIP Switch Setting

- Detach the case or cover of DIP switch and proceed the settings. See the 'Detach the Case or DIP Switch Cover.'
 How to change the settings:
- How to change the settings: power OFF → change settings → power ON → press [RESET] key or input the RESET signal (≥ 20 ms) to the external terminal.

■ DIP SW1

SW1	Function		Defaults

Input / Output Connections

When operation load by sensor power

The sum of operating current capacity of load1 and sensor should not be over external power capacity (50 mA).

■ When operating load by external power

Power for operating load

The capacity of load1 should not be over transistor switching capacity (\leq 30 VDC= 100 mA)

Do not supply the reverse polarity power. When using inductive load (relay, etc.), connector surge absorber at both ends of the

■ How to count by external power supply

This unit starts to count when [H] 5 - 30 VDC \Longrightarrow is applied at CP1 or CP2 after selecting PNP. ([L]: 0 - 2 VDC \Longrightarrow)

■ Using 2 counters with one sensor

Please connect as the power of sensor is supplied from only one of counters and design input logic with same way.

Input Operation Mode
